Hillsdale, MI 49242

DISCLAIMER OF WARRANTY

This motorcycle is sold "as is" with all faults, obvious or not. There are no warranties expressed or implied, including any warranty of merchantability and warranty of fitness for any particular purpose.

"WARNING"

THE COBRA ECX80AC IS A COMPETITION MODEL ONLY AND IS **NOT** MANUFACTURED FOR, NOR SHOULD IT BE USED ON PUBLIC STREETS, ROADS OR HIGHWAYS.

THE USE OF THIS ATV SHOULD BE LIMITED TO PARTICIPATION IN SANCTIONED COMPETITION EVENTS UPON A CLOSED COURSE BY A SUFFICIENTLY SKILLED RIDER AND SHOULD NOT BE USED FOR GENERAL OFF-ROAD RECREATIONAL RIDING.

IMPROPER USE OF THIS MOTORCYCLE CAN CAUSE INJURY OR DEATH.

THIS BIKE IS INTENDED FOR EXPERIENCED RACERS ONLY AND NOT FOR BEGINNERS.

IT IS **YOUR RESPONSIBILITY** AS THE OWNER OF THIS COBRA PRODUCT OR AS THE PARENT, OR LEGAL GUARDIAN OF THE OPERATOR, TO KEEP THIS COBRA PRODUCT IN PROPER OPERATING CONDITION.

THIS ATV WAS DESIGNED FOR RIDERS THAT WEIGH LESS THAN 110 LBS WITH FULL RIDING GEAR AND SHOULD NOT BE OPERATED BY RIDERS THAT WEIGH MORE THAT.

BE SURE THAT THE RIDER ALWAYS WEARS ADEQUATE SAFETY GEAR EVERYTIME HE OR SHE RIDES THEIR COBRA ATV.

IMPORTANT SAFETY NOTICE

WARNING

Failure to follow WARNING instructions could result in severe injury or death to the machine operator, a bystander, or a person inspecting or repairing the machine.

CAUTION:

A CAUTION indicates special precautions that must be taken to avoid damage to the machine.

NOTE:

A NOTE provides key information to make procedures easier or clearer.

General Information

Specifications - General

Items	ECX80 AC
Dimensions	
Wheelbase	42" (1067mm)
Width Front / Rear	43" / 46" (1092mm / 1168mm)
Weight	210 lb
Engine	
Type	2-stroke, single cylinder, reed valve
Cooling system	Liquid-cooled
Displacement	64.8 cc (3.95 Cubic inches)
Bore and stroke	47.6 mm x 44.7 mm
Ignition system	Digital Electronic
Spark plug	Champion 8339
Gap	0.023" – 0.025" (0.58 – 0.64 mm)
Fuel type	93 octane pump gasoline OTHER RACE FUELS ARE NOT RECOMMENDED
Oil type	<i>Cobra Venom 2-cycle Race Oil</i>
Fuel / oil mix ratios	32:1
Ignition timing	.050" (1.3mm) BTDC
Carburetion	26mm Mikuni VM
Main jet	190
Slow (Pilot) jet	50
Jet needle	5F21, 4th position from the top
Float height	
Transmission	
Speed	Six speed
Clutch	Manual hydraulic
Final drive ratio	14/48 T
Transmission / clutch oil type	<i>Cobra Power Shift Transmission Lubricant</i>
Quantity	530 ml (18 oz)

Chassis	
Tire Pressure front / rear	(7 psi / 5 psi)
Travel, front / rear	240mm / 247mm (9.4" / 9.7")
Race sag, front / rear	96mm / 99mm (3.8" / 3.9")
Free sag, front / rear	38mm / 40mm (1.5" / 1.6")

Specifications - Torque Values

ENGINE Fastener	Torque Value			Size & Remarks
	ft-lb	in-lb	Nm	
Cylinder head nuts	14	170	19	7mm
Engine oil drain	3	36	4	8 x 1.25
Engine oil fill	2	24	2.7	14 x 1.0
Spark Plug	(SP)	(SP)	(SP)	14 x 1.25
Crank case half	5	60	6.8	6 x 1.0
Crank case cover	5	60	6.8	6 x 1.0
Flywheel rotor nut	40	480	54	10 x 1.25 (G)
Clutch hub	40	480	54	10 x 1.25 (G)

Units of mm unless otherwise specified

(G) denotes the use of wicking / bearing retainer (green) thread locking agent to applied to the mating surfaces of the two components but not the threads.

(SP) To apply the proper torque to the spark plug when inserting, one must first screw the spark plug in until the metal gasket ring causes resistance and then turn another 1/8 to 1/4 turn.

CHASSIS Fastener	Torque Value			Size & Remarks
	ft-lb	in-lb	Nm	
Handle bar mounts	15	177	20	8 x 1.25
Handle bar clamps	15	177	20	8 x 1.25
Front engine mount	22	265	30	8 x 1.25
Rear brake lever pivot	10	120	13.6	8 x 1.25
Upper shock mount	40	480	54	10 x 1.5
Lower shock mount	40	480	54	10 x 1.5
Swingarm pivot	75	900	102	14 x 2.0

Units of mm unless otherwise specified

(R or G) designates that the application requires the use of high strength (red or green) thread locking agent applied to the threads.

(B) designates that the application requires the use of medium strength (blue) thread locking agent applied to the threads.

Optional Suspension Components

Front shock springs

Weight of Rider (lb)	Helper	Main
Less than 65	SCEX0065P (SILVER, 65 LB/IN)	SCEXA135 (BLUE, 135 LB/IN)
65 to 100	SCEX1080 (RED, 80 LB/IN)	SCEXA145 (RED, 145 LB/IN)
Greater than 100	SCEX1095 (YELLOW, 95 LB/IN)	SCEXA155 (YELLOW, 165 LB/IN)

Rear shock springs

Weight of Rider (lb)	Main
Less than 65	SCEX2350 (Yellow, 350 LB/IN)
65 to 100	SCEX2375 (Red, 375 LB/IN)
Greater than 100	SCEX2400 (Black, 400 LB/IN)

	Spring Rate (lb/in)	Color	Part Number
Helper	65	Silver	SCEX0065P
	80	Red	SCEX1080
	95	Yellow	SCEX1095
	110	White	SCEDX1110

	350	Yellow	SCEX2350
	375	Red	SCEX2375
	400	Black	SCEX2400

Spring rate chart for Cobra Fox quad shocks

Break-In Procedure

Your Cobra Motorcycle is a close-tolerance high performance machine and break-in time is very important for maximum life and performance. The ECX80 AC can be ridden hard after the first ½ hour break-in time but it is recommended that no adjustments are made to the carburetion or suspension until the full 8 hours of bike break-in has elapsed. Also, after the engine, transmission, and drive train have been broken-in for the full 8 hours, the bike will be faster!

Use a fuel / oil mixture of 32:1 for the full 8 hour break-in period. Be sure to use 93 octane pump gas, or *Sunoco MO2_x*, with Cobra's specially formulated *Cobra Venom 2-cycle Race Oil*. (Part # MCMUOL02)

CAUTION:

Failure to use proper fuel or oil may result in premature engine wear, or damage to the machine.

Adhering to the following break-in schedule will result in long lasting high performance machine.

- First 5 minute period, operate the bike in neutral with a combination of idle and high RPM operation. (avoid prolonged high RPM rev it good at least once or twice per minute)
- Allow the engine to cool
- Ride for 15 minutes maximum, avoiding prolonged high RPM operation.
- Cool and inspect bike for loose fasteners.
- Next ½ hour of operation, avoid prolonged operation at Wide Open Throttle.
- After 1 hour of operation
 - Check for loose bolts and nuts on the bike and retighten as necessary (proper torque values are listed under Specifications).
 - Clean the carburetor bowl.
 - Change the transmission / clutch lubricant with *Cobra Power Shift Transmission Lubricant*
 - Replace the fuel filter.
- After 8 hours of operation have a Certified Cobra Mechanic change the shock oils.
- Your bike is now ready for the highest level of competition!

Starting Procedure

Before starting the machine inspect the following:

- Insure that the fuel tank contains an adequate volume of fuel / oil mixture to complete the distance required. (93 octane pump gas with Cobra's specially formulated *Cobra Venom 2-cycle Race Oil*)
- Check for proper tire pressure in both tires.
- Observe the chain tension and adjust if necessary.
- Observe the coolant level and fill if necessary.
- Observe the level of lubricant in the transmission and add *Cobra Power Shift Transmission Lubricant* if necessary.
- Verify that the chain rollers do not have improper wear.
- Inspect the frame, for;
 - Cracks in the metal.
 - Cracking paint which might indicate overly stressed material.
- Verify that the handlebars are tight.
- Check the throttle for;
 - Smooth operation and sound closing.
 - Frayed strands of the cable inside the throttle housing.
- Check for loose bolts and nuts, and re-torque as necessary.
- Verify that the air filter is clean and properly saturated with oil.
- Turn the fuel on by rotating the fuel petcock knob to the vertically downward position (reserve position is horizontally inward).

CAUTION:

For best results from your Cobra ATV use only the recommended fuels. Testing has shown that most 'race' fuels actually degrade performance.

When your pre-ride inspection is complete the bike may be started. For a cold engine follow this procedure.

1. Reaching down to the carburetor, on the left side of the bike, push down on the black choke lever.
2. Kick start the engine.
3. Rev the engine in short spurts, turning the throttle no more than 1/4 open until the engine will run without the choke.
4. Verify a functional engine shut-off switch by shutting off the engine.
5. Restart the engine and proceed with riding when the engine is sufficiently warm (i.e. the side of the cylinder is warm to touch).

CAUTION:

Never rev an engine full throttle when it's cold or slightly warmed up. Cobra recommends that you tell your child to take it easy the first couple of minutes in practice until the engine comes up to full operating temperature. Make sure your engine is properly warmed up before racing.

General Tips

1. Always wear a **helmet** and other **protective riding gear**.
2. Cobra recommends that you tell your child to take it easy the first couple of minutes in practice until the engine comes up to full **operating temperature**.
3. Make sure your riders' foot is not resting on the **rear brake** pedal while they are riding.
4. Evaluate the bikes **jetting** only after it has been warmed up to race temperatures.
5. A **properly maintained** machine is safer, faster, and more fun to ride.
6. When **washing the bike**, be careful to not directly aim the hose at the air filter area.
7. Make sure that there is adequate free play in both the **front lever and rear brake pedal**.
8. Your Cobra ATV has a 10 digit VIN (Vehicle Identification Number). The first three digits indicate the model and the seventh indicates the model year (MY).
 - a. Example, ECXxxx7xxx is a 2007 MY ECX70.

Maintenance

Schedule & Tips

It is important that you adhere to this maintenance schedule so as to promote the longevity of your Cobra Motorcycle.

- Between each ride
 - Inspect the fuel filter for contaminants.
 - Check the air filter (clean and re-oil as necessary).
 - Insure the smooth operation of the throttle cable (throttle soundly 'clacks' shut).
 - Check for frayed strands of the throttle cable inside the throttle housing and replace if necessary.
 - Check for adequate tire pressures and adjust if necessary.
 - Check all nuts and bolts for proper torque and re-torque if necessary.
 - Spray all moving parts with WD40 or other light oil.
 - Check drive chain for
 - Proper tension and adjust if necessary.
 - Adequate lubrication and lubricate if necessary.
 - Check the frame for cracks in the metal or cracks in the paint that might indicate that the metal has been stressed beyond it's safe limits. Replace or get properly rewelded as necessary.
- Every 2 hours of operation
 - Replace the transmission oil with *Cobra Power Shift Transmission Lubricant*.
- Every 10 hours of operation
 - Have the shock oil replaced by a Certified Cobra Mechanic.

CAUTION:

1. If you ever need to weld anything on the bike, disconnect the spark plug cap, unplug the ignition, disconnect the kill switch, scrape the paint bare near the area to be welded and put the ground clamp as close to the area to be welded as possible.

WARNING

Be sure the fuel tank and carburetor have been removed and safely located away from the welding process.

2. The frame is a low carbon alloy tubing and it is important to weld it with the proper rod and heat settings set as light as possible. Cobra recommends replacing the frame with a new one if the old one becomes damaged.

M1: Replacing Transmission Lubricant

Tools needed:

- 530 ml (18 oz) *Cobra Power Shift Transmission Lubricant*
- large flat blade screwdriver
- 13 mm wrench or socket

Procedure:

1. Begin this procedure with a bike that has been ridden more than 5 minutes but less than 10 minutes. It is desired to have the engine warm enough so that the oil 'runny' but not so hot that there is risk of being burned by the engine or the oil.

WARNING

Hot oil and hot components on the motorcycle may cause burns.

2. Lean bike against something or set on stand with oil drain hole.
3. Using the 13 mm wrench, remove the oil drain bolt located on the right side of the engine (figure 1).

Figure 1

4. After it has drained, reinstall the drain screw with gasket.
5. Remove the oil fill plug and pour in 530 ml (18 oz) 85W 90 gear lubricant.

NOTE: Leaning the bike over onto its left hand side will facilitate the oil filling procedure.

6. Reapply the oil fill screw, securely, being sure the gasket is in place.

M2: Chain adjustment

Tools needed:

- 13 mm wrench or socket
- 5mm pin (Screw driver or hex key will do)

Procedure:

1. Loosen the eccentric housing on the swingarm with two 13mm tools.
2. Stick the 5mm pin through the sprocket into the eccentric hole.
3. Push the quad forward or backward, turning the wheels (i.e. the sprocket) in the direction shown until the desired chain tension is achieved (see fig. 2).

Figure 1

NOTE:

The location of the pin hole is the 'fattest' part of the eccentric. Restated, if the pin hole is all the way forward, the chain is as tight as possible, and if the pin hole is all the way back, the chain is as loose as possible.

CAUTION:

Proper chain tension allows no less than ½" (12mm) free play through out the range of rear suspension travel.

NOTE:

It may be handy to set backwards on the seat and feel the chain as you weight, and unweight, seat to feel for chain free play.

4. After achieving the proper adjustment retighten the two eccentric pinch bolts.

CAUTION:

Be sure to remove the pin from the eccentric before riding.

M3: Air Filter Cleaning

This Cobra Motorcycle comes with a unique air filter / air boot unit designed to facilitate motorcycle service.

Tools recommended for air filter maintenance:

- Srewdriver
- Foam filter oil

Procedure

1. Removed the filter from the carburetor.
2. Clean the filter with cleaning solvent and then again with hot soapy water.
3. Allow it to dry thoroughly.
4. Saturate with foam filter oil and remove excess.

WARNING

Do not clean the air filter with gasoline or other highly volatile petroleum product. Cleaning solvent, diesel fuel, or kerosene would be preferred but caution should still be taken.

NOTE:

The biodegradable air filter oils, greases, and cleansers work acceptably with this Cobra Motorcycle.

NOTE:

It is very important to keep the air filter clean and properly oiled with high quality water-resistant foam filter oil. It's very important to oil your filter consistently each time because varied amounts of oil will change your carburetor jetting.

NOTE:

Make sure you change or clean your filter after each moto or significant ride. We recommend carrying three or more filters in your toolbox.

- 1 for practice
- 1 for each moto

CAUTION:

Dusty conditions will require more frequent cleaning.

M4: Front end

Toe in adjustment

Riders and parents have provided feedback that they prefer the toe in adjustment between ½" (12mm) out to ½" (12mm) in. This is set by adjusting the length of the tie rod assemblies. See figure 3 for direction of turn.

⚠ WARNING

Adjust both wheels so that they have the same amount of toe in.

Figure 3

Steering

The unique Cobra front end will exhibit some free play from the factory and that the seals (it that's what you want to call them) will fall out after the first ride. We have found that this causes no adverse effects and that the looseness does not get significantly worse as long as the bearings are sprayed with a spray lubricant (WD40 or similar) upon each ride.

14	ECDC0007	SHAFT, TRANSMISSION OUTPUT
15	ECDC0014	GEAR, 2 ND OUTPUT, 31T
16	ECDC0017	SHAP RING, EXTERNAL 18MM (3 REQ'D)
17	ECDC0013	GEAR, 5 TH , OUTPUT, 30T
18	ECDC0011	GEAR, 4 TH OUTPUT, 28T
19	ECDC0010	GEAR, 3 RD OUTPUT, 34T
20	ECDC0015	GEAR, 6 TH OUTPUT, 26T
21	ECDC0016	GEAR, 1 ST OUTPUT, 37T
22	ECDC0047	SHIFT DRUM
23	ECDC0050	SHIFT ROD (2 REQ'D)
24	ECDC0048	SHIFT FORK, INPUT
25	ECDC0049	SHIFT FORK, OUTPUT (2 REQ'D)
26	HCDP1401	DOWEL, SOLID CENTERING (2 REQ'D)
27	ECKG0031	BEARING, PRIMARY SHAFT IGNITION SIDE
28A	ECMU0040	SHIM TRANSMISSION 0.030" (0.48mm) THICK
28B	ECMU0040T	SHIM TRANSMISSION 0.015" (0.4 mm) THICK
NOT SHOWN	ECMU0146	BUSHING, SWINGARM PIVOT ENGINE MOUNT (2 REQ'D)
32	ECMU0549	BEARING, NEEDLE, SHIFT DRUM LEFT SIDE

Parts – Exhaust System

Figure 18

Exhaust System		
REF #	PART #	DESCRIPTION
1	XAEX2005	ECX70 EXHAUST PIPE
2	ZCMOTE11	HEADER PIPE O-RINGS (2 REQ'D)
3	XCMU0005	SPRING, EXHAUST – SHORT
NOT SHOWN	XCMU0030	COVER, EXHAUST SPRING
4*	MCMUGR02	PIPE GROMMET MALE (ONLY AVAILABLE IN MCMUGR02 GROMMET KIT)
5*	MCMUGR10	PIPE GROMMET FEMALE
6*	MCMUGR02	PIPE GROMMET SPACER (ONLY AVAILABLE IN MCMUGR02 GROMMET KIT)
7*	HCWF1478	PIPE GROMMET WASHER (2 REQ'D)
8*	HCBF0635	M6X35 FLANGE HEAD BOLT
	MCMUGR02	GROMMET KIT
NOT SHOWN	HCNL0601	6MM LOCK NUT – FOR FRONT PIPE MOUNT
9	XCMU0032	SILENCER
NOT SHOWN	XAEX0001	SILENCER – ‘STAR’ REINFORCED
NOT SHOWN	XCMU0026	SILENCER PACKING
NOT SHOWN	HCBB0408	M4 X 8 SILENCER SCREW
10	XCKG0009	PIPE / SILENCER SEAL
11	MCMUGR03	MOUNTING GROMMET (4 REQ'D TOTAL, 2 PER BOLT)
12	TCKG0001	SPACER (2 REQ'D)
13	HCBF0630	M6X30 FLANGE HEAD BOLT (2 REQ'D)
14	ZCEX0001	PIPE COUPLING O-RING (2 REQ'D)

*Parts are included in MCMUGR02 grommet kit.

Parts - Front A-Arms & Steering Upright

Figure 19

A-arms & steering upright		
REF #	PART #	DESCRIPTION
1	GAEX0001	A-ARM FRONT TOP (SAME PIECE FROM LEFT TO RIGHT)
2	GAEX0002	A-ARM BACK TOP (SAME PIECE FROM LEFT TO RIGHT)
3	GAEX0007	A-ARM FRONT BOTTOM RIGHT
	GAEX0006	A-ARM FRONT BOTOTM LEFT
4	GAEX0009	A-ARM BACK BOTTOM RIGHT
	GAEX0008	A-ARM BACK BOTTOM LEFT
5	HCBC1065	10MM X 65 SOCKET HEAD CAP SCREW (BLACK OXIDE)
6	MCEXBR05	BUSHING, A-ARM
7	GCEX0006	SPACER, A-ARM PIVOT TUBE
8	HCBF1070	10MM X 70 FLANGE HEAD BOLT
9	HCNL1001	10MM LOCKNUT
10	GAEX0003/4	UPRIGHT WITH SPINDLE, 03 Right, 04 Left
NOT SHOWN	GCEX0032	GREASE FITTING
11	MCEXCL01	SNAP RING, 1-3/8 INTERNAL
12	MCEXBR01	BEARING, SPHERICAL
13	HCBC0806	8MM X 30 SOCKET HEAD CAP SCREW (2 REQ'D)
14	GCEX0009	STEERING ARM

Parts – Front Brakes

Figure 20

Front Brakes		
REF #	PART #	DESCRIPTION
	BAEX0004	BRAKE SYSTEM COMPLETE
	BCEX0024	BANJO BOLT
	BCEX0025	BRAKE PADS
	BCEX0029	CRUSH WASHER
1	BCDC0003	MASTER CYLINDER
2	BCEX0026	REPLACEMENT LINE
3	BCEX0028	CALIPER LEFT
4	BCEX0027	CALIPER RIGHT
5	BCEX0020	BRAKE ARM
6	HCBC0825	M8 X 25 SHCS
7	BCEX0021	BRAKE MOUNT
8	BCEX0019	BRAKE ROTOR
Not Shown	HCWF0504	BRAKE ROTOR SPACER (4 REQ'D PER ROTOR)
9	HCBB0516	ROTOR BOLT
10	HCBC0602	M6 X 20 SHCS
11	HCBF0640	M6 X 40 FLANGE HEAD BOLT
12	HCBF0635	M6 X 35 FLANGE HEAD BOLT
13	BCEX0022	BRAKE MOUNT SPACER
14	WCEX0001	FRONT HUB WITH WHEEL STUDS
16	GCEX0008	WHEEL SPINDLE (SAME L&R)
17	HCNS1400	M14 CASTLE NUT (SAME L&R)
18	HCCP0002	COTTER PIN (SAME L&R)
19	GCEX0022	INNER HUB SEAL (SAME L&R)
NOT SHOWN	ECKGBR01	INNER HUB BEARING
20	WCEX0301	INNER HUB BUSHING
21	WCEX0300	CENTER HUB SPACER
22	ECMU0001	OUTER HUB BEARING
23	WCEX0302	OUTER HUB BUSHING
24	GCEX0023	OUTER HUB SEAL
		BRAKE FLUID

Parts – Front Shock

Figure 21

Front Shock		
REF #	PART #	DESCRIPTION
1	SAEX2005	SHOCK ECX70 – FRONT (2 REQ'D)
2	SCEX1080	SPRING, HELPER, 80 LB/IN (STANDARD)
		<i>See Optional Components section of this manual for other springs</i>
3	SCEX1145	SHOCK SPRING, STANDARD (RED, 145 LB/IN)
		<i>See Optional Components section of this manual for other springs</i>
4	SCSP0001	TRAVEL LIMITER (1.50")
	SCSP0002	TRAVEL LIMITER (1.25")
	SCSP0003	TRAVEL LIMITER (1.00")
5		TOP SPRING PERCH
6	HCNL1001	10MM LOCK NUT (2 REQ'D)
7	HCWF0010	10MM FLAT WASHER
8	HCBF1040	10MM X 44 SHOCK BOLT
9	HCBC1002	10MM X 50 SOCKET HEAD CAP SCREW
10	SCKGFX04	PRELOAD RING BOTTOM
11	SCKGFX05	PRELOAD RING TOP (LOCK RING)

Parts – Miscellaneous

If you couldn't find it in one of the other pictures try the table below.

PART #	DESCRIPTION
WCEX0005	REAR WHEEL WITH TIRE
WCEX0004L	LEFT FRONT WHEEL WITH TIRE
WCEX0004R	RIGHT FRONT WHEEL WITH TIRE
FAEX2006	FRAME
FCEX0002	CHAIN SLIDER SPLIT BUSHING
HCBC1120	M10 X 120 (FRONT ENGINE MOUNT BOLT)
HCWF0010	10MM FLAT WASHER (2 REQ'D)
HCNL1001	10MM LOCK NUT
FCEX0038R	SPACER, FRONT ENGINE MOUNT RIGHT
FCEX0038L	SPACER, FRONT ENGINE MOUNT LEFT
FAE70001	ENGINE MOUNT – BOLT ON (2 REQ'D)
HCBC0816	8X16MM SOCKET HEAD CAP SCREW (4 REQ'D)

Parts – Plastic Bodywork & Seat

Figure 22

Plastic and Bodywork		
REF #	PART #	DESCRIPTION
1	TCEX0001Y	FRONT CLIP - YELLOW
NOT SHOWN	HCBB0616	M6 X 16 BUTTON HEAD (4 REQ'D AT BACK)
NOT SHOWN	HCWF0601	6 MM FLAT WASHER (4 REQ'D AT BACK)
NOT SHOWN	HCBB0625	M6 X 25 BUTTON HEAD (2 REQ'D AT FRONT)
NOT SHOWN	HCWF0601	6MM FLAT WASHER (2 REQ'D AT FRONT)
NOT SHOWN	MCMUGR10	GROMMET, (2 REQ'D AT FRONT)
NOT SHOWN	HCWF1478	WASHER, FENDER (2 REQ'D AT FRONT)
NOT SHOWN	HCNL0601	6MM LOCK NUT (2 REQ'D AT FRONT)
2	TCEX0002Y	REAR DECK - YELLOW
NOT SHOWN	HCBB0625	M6 X 25 BUTTON HEAD (2 REQ'D PLASTIC TO GRAB BAR)
NOT SHOWN	HCWF0601	6MM FLAT WASHER (2 REQ'D PLASTIC TO GRAB BAR)
NOT SHOWN	MCMUGR10	GROMMET, (2 REQ'D PLASTIC TO GRAB BAR)
NOT SHOWN	HCWF1478	WASHER, FENDER (2 REQ'D PLASTIC TO GRAB BAR)
NOT SHOWN	HCNL0601	6MM LOCK NUT (2 REQ'D PLASTIC TO GRAB BAR)
NOT SHOWN	HCBB0616	6MM BUTTON HEAD (2 REQ'D AT FRONT)
NOT SHOWN	HCWF0601	6MM FLAT WASHER (2 REQ'D AT FRONT)
3	TAEX0011	SEAT
NOT SHOWN	HCBB0635	M6 X 35 BUTTON HEAD (1 REQ'D SEAT TO PLASTIC)
NOT SHOWN	MCMUGR04	GROMMET (1 REQ'D SEAT TO PLASTIC)
NOT SHOWN	HCWF1478	WASHER, FENDER (1 REQ'D SEAT TO PLASTIC)
NOT SHOWN	HCNL0601	6MM LOCK NUT (1 REQ'D SEAT TO PLASTIC)
4	RCE50002	FUEL VENT HOSE
5	TCHA0002	FUEL CAP
6	TCEX0019	FUEL TANK (NO PETCOCK, CAP, OR BRACKET)
7	RCE50001	FUEL LINE
8	TCMU0000	FUEL PETCOCK ('06 LEVER)
9	HCBC0601	M6 X 16 SOC. HEAD BOLT (2 REQ'D)
10	MCMUGR04	GROMMET (2 REQ'D)
11	TCEX0110	FUEL TANK BRACKET
NOT SHOWN	TCHA0005	TANK MOUNT REAR
NOT SHOWN	HCFH0620	M6 X 20 FLAT HEAD
NOT SHOWN	HCBF0616	M6 X 16 FLANGE HEAD BOLTS (2 REQ'D)
NOT SHOWN	HCBF0620	M6 X 20 FLANGE HEAD BOLT (1REQ'D AT THE REAR)
NOT SHOWN	TCKG0001	SPACER, TANK MOUNT (1REQ'D AT THE REAR)
NOT SHOWN	TCEX2009	GRAPHICS

Parts – Rear Brake

Figure 23

Rear Brake System		
REF #	PART #	DESCRIPTION
	BADC0001	BRAKE COMPLETE
1	BCEX0007	BRAKE PEDAL
2	BCDC0009	BRAKE PIVOT BOLT
3	HCBC0601	M6X16 SOC. HEAD BOLT
4	FCEX0018	BRAKE ADJUST ECCENTRIC
5	BCEX0012	BRAKE RETURN SPRING
6	BCMU0501	SEAL – BRAKE PEDAL (2 REQ'D)
7	BCDC0004	PUSH ROD, REAR BRAKE
8	HCBC0601	M6X16 SOC. HEAD BOLT (2 REQ'D)
9	HCWF0601	6MM FLAT WASHER (2 REQ'D)
10	HCPP0832	BRAKE HOSE CLAMP FASTENER (2 REQ'D)
11	HCCC0000	BRAKE HOSE CLAMP (2 REQ'D)
12	BCDC0151	REAR BRAKE HOSE
13	HCBC0850	M8X50 SOCKET HEAD CAP SCREW
14	HCBC0825	M8X25 SOCKET HEAD CAP SCREW
NOT SHOWN	BCEX0032	SPACER – CALIPER MOUNT
15	BCEX0014	CALIPER SPACER (2 REQ'D)
16	BCDC0002	CALIPER – REAR BRAKE
17	BCDC0007	BRAKE PAD KIT – ORGANIC
17	BCEX0013	BRAKE PAD KIT – SINTERED METAL
18	BAEX0006	REAR BRAKE CARRIER, FULL ADJUSTABLE
NOT SHOWN	GCEX0016	SPACER BRAKE HUB
NOT SHOWN	WCX0006	SNAP RING, BRAKE CARRIER RETAINER
19	GCEX0014	BRAKE/SPROCKET HUB
20	BCEX0004	BRAKE ROTOR REAR QUAD
NOT SHOWN	HCBC0625	6MM X 25 SOCKET HEAD CAP SCREW (2 REQ'D)
21	HCBB0830	8MM X 30 BUTTON HEAD (4 REQ'D)
22	HCNL0801	8MM LOCKNUT (4 REQ'D)
23	BCDC0005	MASTER CYLINDER - REAR
24	BCDC0012	BRAKE LINE – RESERVOIR TO MASTER CYLINDER
NOT SHOWN	HCBC0601	M6X16 SOC. HEAD BOLT
NOT SHOWN	WCMU0006	SPACER – RESERVOIR MOUNT
25	BCDC0006	BRAKE FLUID RESERVOIR
26	MCMUCL05	LINE CLAMP (2 REQ'D)
NOT SHOWN	BCDC0152	BANJO BOLT
NOT SHOWN	BCDC0153	CRUSH WASHER

Parts – Rear Drive

Figure 24

Rear Drive		
REF #	PART #	DESCRIPTION
1	GAEX0033	REAR AXLE -SOLID
2	WCEX0003	WHEEL LUG (8 REQ'D)
3	HCNS1001	LUG NUT (8 REQ'D)
NOT SHOWN	HCWF0010	LUG WASHER (8 REQ'D)
4	GCEX0014	BRAKE/SPROCKET HUB (2 REQ'D)
NOT SHOWN	HCBC0625	M6 X 25 HUB PINCH BOLT (2 PER HUB)
5	HCBH0808	M8 X 30 HEX HEAD BOLTS (4 REQ'D)
6	HCNL0801	M8 LOCK NUT (4 REQ'D)
7	PCDC00XX	SPROCKET (37T – 51T) – XX DENOTES # OF TEETH
9	GCEX0016	BRAKE HUB SPACER
10	HCKW0001	HUB KEY
11	GCEX0024	REAR WHEEL HUB SPACER (2 REQ'D)*
12	GCEX0011	REAR WHEEL HUB (2 REQ'S)
13	HCCP0002	COTTER PIN (2 REQ'D)
NOT SHOWN	PCMU0104	420 CHAIN – 104 LINK
14	HCNC0020	20 MM X 1.5 NUT CASTLE
15	MCEXBR03	BEARING, REAR AXLE (4 TOTAL, 2 PER SIDE)
16	GCEX0015	ECCENTRIC

- UP TO TWO HUB SPACERS CAN BE USED PER SIDE TO ADJUST TRACK WIDTH. USING THREE HUB SPACERS MAY CAUSE THE SPLINES TO STRIP.

Parts – Rear Shock

Figure 25

Rear Shock		
REF #	PART #	DESCRIPTION
1	SAE72009	SHOCK, REAR QUAD FOX
2	SCEX2375	SHOCK SPRING, STANDARD (WHITE, 375 LB/IN)
	SCEX2350	SHOCK SPRING, LIGHT (350 LB/IN)
	SCEX2400	SHOCK SPRING, HEAVY (400 LB/IN)
3	SCKGFX04	PRELOAD RING BOTTOM
4	SCKGFX05	PRELOAD RING TOP (LOCK RING)
5	HCBC1050	10MM X 50 SHCS
6	HCBF1040	10MM X 44 SHOCK BOLT
7	HCWF0010	10MM FLAT WASHER
8	HCNL1001	10MM LOCKNUT
9	SCKGFX01	TOP WIDTH REDUCER FOR BEARING STYLE END
9	ZCMU0114	TOP O-RING FOR BEARING STYLE END
10	SCEX0008	BOTTOM WIDTH REDUCER FOR BEARING STYLE END
10	ZCMUB208	BOTTOM O-RING FOR BEARING STYLE END

Parts – Swingarm Assembly

Figure 26

Swingarm		
REF #	PART #	DESCRIPTION
1	GAEX2009	SWINGARM
2	GCMU0030	BUSHING, SWINGARM (4 PER)
3R	GCE70005	SPACER, PIVOT TUBE (RIGHT SIDE / STEPPED SPACER WITH GROOVE)
3L	GCE70004	SPACER, PIVOT TUBE (LEFT SIDE / STEPPED SPACER WITHOUT GROOVE)

Engine Parts / Service

Trained technicians with precision gauging and proper assembly fixtures carefully assemble all Cobra engines to specific tolerances. If you feel you have the skills, and the appropriate tools, to perform the following service tasks please follow the instructions closely. The part numbers are listed throughout to help you when ordering parts from your local Cobra dealer.

If you don't feel comfortable with the service work, log on to www.cobramotorcycle.com to find a Cobra dealer or Call 517 437 9100.

Engine Service

One method for determining whether the top end of your engine needs rebuilt is to perform a WOT (Wide Open Throttle) kicking compression test. Before performing the procedure please read the caution notes below.

CAUTION:

- There appears to be a wide range of variability in reading compression gauges across the country.
- The head volume of this Cobra Motorcycle is very small and so requires many kicks ~20 before you establish the most accurate reading possible.
- Because of the geometry of the spark plug used in this Cobra Motorcycle, the adapter used with your compression tester must have a similar volume protruding into the combustion chamber to establish an accurate value.
- Length of hose on the compression tester will affect the reading. The shorter the hose length the more accurate your reading will be.

Because of these difficulties in measuring an *absolute* compression value, a useful *relative* value can be achieved by testing your bike's compression with your own particular gauge after a new top end or when the bike is new so that you know what your particular gauge reads on a 'fresh' engine. When it has dropped to 90% of its original value the engine will be down on power and would benefit from a rebuild. When it's dropped to 80% it really needs rebuilt! Using the table below will help you determine monitor the condition of your top end.

	Engine is Fresh Measured Value	Engine Down on Power Measured Value * 0.9	Engine NEEDS Rebuilt Measured Value * 0.8
Example	110 psi	110 psi * 0.9 = 99 psi	110 psi * 0.8 = 88 psi
Your Values			

Procedure for Compression Testing

1. Shut off the fuel petcock.
2. Install the compression gauge into the spark plug hole.
3. Hold the throttle to wide open, and kick repeatedly (approximately 20 times) or until the gauge reading does not increase in value with each kick.

Base Gasket Selection

Tools required

- 17mm wrench
- 1mm flexible solder material
- measurement calipers

When rebuilding the 'top end' of your Cobra motorcycle, care must be taken to ensure the proper squish clearance. Squish clearance is defined as the minimum distance between cylinder head and piston at TDC, and there are negative effects of either having too much or too little clearance. Since parts like the crank, connecting rod, cylinder head, piston, and crankcases all have varying tolerances, Cobra offers several different base gasket thickness' to ensure that you can always set the squish clearance of your engine to factory specifications.

For base gasket replacement use the code (see figure 21 for location) along with the table on the following page reorder the correct thickness gasket.

Figure 21

Code	Supplied Base Gasket Thickness		Cobra #
	#	mm	inch
2	0.2	0.008	ZCMU0702
	0.25	0.010	ZCMU0011
3	0.3	0.012	ZCMU0703
4	0.4	0.015	ZCKG0501
5	0.5	0.020	ZCMU0705
6	0.6	0.024	ZCMU0706
7	0.7	0.028	ZCMU0707
8	0.8	0.031	ZCMU0708
9	0.9	0.035	ZCMU0015
1	1.0	0.039	ZCMU0016

NOTE

Tolerances will affect the actual gasket thicknesses.

If during the course of the maintenance more parts than the base gasket are changed, the squish clearance should be measured, and possibly a different base gasket will be required.

The easiest way to measure squish clearance is with 1mm to 1.5mm thick flexible solder wire (available through most popular electronic stores). The process is as follows:

- Assemble the top end of the engine with either; 1) the crankcase stamp recommended base gasket or, 2) if assembling with a new set of cases assemble with a 0.4mm (0.015”) base gasket, and torque the head nuts to the proper torque specifications leaving off the spark plug and ignition cover (piston rings can be left off to ease assembly).
- Carefully insert the solder wire through the spark plug hole, into the cylinder far enough such that the tip of the wire touches the left or right side cylinder wall (not the front or back as the piston will rock more and give incorrect measurement).
- Hold the wire at this position and rotate the crankshaft, by the flywheel nut (or kick lever) three revolutions to ‘smush’ the solder wire.

CAUTION:

If you rotate the flywheel nut in a counterclockwise direction there is a risk of loosening the nut.

- Pull out the wire and measure the solder thickness at the thinnest location near its tip accurately with the thin tips of calipers.
- Adjust base gasket thickness as necessary to get the desired value.

Upon completion, your final assembly squish clearance should agree with the chart below

Measured Squish Clearance (minimum) (These numbers only apply when measured as described above)

Fuel & Air System

Reeds

CAUTION:

- The reeds must lay flat on the reed cage.
- If the reed tips aren't lying flat, replace them immediately.
- The reeds must have a tight seal on the reed cage.
- If the reed is damaged in any way, replace it. This means cracks, chips, and ruptures. Anything abnormal, replace the reeds.

Take the reed cage out and hold it up to the light and look in through the cage. If you see light between the reed pedals and the frame, then replace the reeds. If you do not see light, then the reeds should be ok. (See figure 28)

Figure 28, The presence of light indicates that the reeds should be replaced, or possibly turned over.

Carburetor Cleaning

⚠ WARNING

Clean the carburetor in a well-ventilated area, and take care that there is no spark or flame anywhere near the working area; this includes any appliance with a pilot light. Because of the danger of highly flammable liquids, do not use gasoline or low flash-point solvent to clean the carburetor.

1. Make sure the fuel is shut off.
2. Remove the carburetor.
3. Drain the fuel in the carburetor.
4. Disassemble the carburetor.

CAUTION:

Do *not* use compressed air on an assembled carburetor. Or the pressure may deform the float. Do not use a strong carburetor cleaning solution, which could attack the parts of the carburetor; instead, use a mild high cleaning solution safe for plastic parts.

5. Immerse all the metal parts in a carburetor cleaning solution.
6. Rinse the parts in water.
7. After the parts are cleaned, dry them with compressed air.
8. Blow out the fuel passages with compressed air.
9. Assemble the carburetor
10. Install the carburetor onto the motorcycle.

Exhaust

The pipe is a crucial element to a two-stroke engine. Any kinks, dents, or damage done to the pipe will result in a performance loss.

NOTE:

Be sure to take the pipe off, and remove any carbon that may be built up. Carbon build up is created from exhaust. Exhaust has oils in it, and the oils cling to the walls of the inside of the pipe. Over a long period of time, the diameter of the pipe will decrease, due to carbon build up. So it is essential to clear the residue.

CAUTION:

For optimum performance it is important to repack the silencer. Signs of your silencer needing to be repacked are:

- The bike is louder than normal.
- A loss of power.

Tuning

Carburetor

Jetting Decisions

Although your Cobra is sent from the factory with the carburetor jetted for optimal performance, you may find it necessary to adjust your particular jetting due to current weather conditions, altitude, fuel variations, and/or engine modifications.

CAUTION:

Proper jetting is very important for engine performance and engine life. Symptoms of improper jetting are listed below.

- Symptoms of incorrect oil or oil / fuel ratio
 - Poor acceleration
 - Misfire at low engine speeds
 - Excessive smoke
 - Spark plug fouling
 - Excessive black oil dripping from exhaust system
- Symptoms of too rich a fuel mixture
 - Poor acceleration
 - Engine will not 'rev' out, blubbers on top
 - Misfire at low engine speeds
 - Excessive smoke
 - Spark plug fouling
 - Wet, black, or overly dark spark plug (when removed for inspection)
- Symptoms of too lean a fuel mixture
 - Pinging or rattling
 - Erratic acceleration
 - Same actions as running out of fuel
 - High engine temperature
 - White spark plug (when removed for inspection)

NOTE:

When inspecting the spark plug to evaluate jetting, a properly jetted machine will produce a spark plug that is dry and light tan in color.

Environmental and altitude related mixture adjustments		
Condition	Mixture will be	Required adjustment
Cold air	Leaner	Richer
Warm air	Richer	Leaner
Dry air	Leaner	Richer

Very humid air	Richer	Leaner
Low altitude	Standard	None
High altitude	Richer	Leaner
Low barometric pressure	Richer	Leaner
High barometric pressure	Leaner	Richer

NOTE:

- Before making any carburetor jetting changes verify that:
 - You are using the proper fuel and oil
 - The fuel is fresh and uncontaminated
 - The oil and fuel have been mixed in the proper ratio
 - The carburetor is clean (no plugged jets)
 - The air filter is properly clean and oiled
 - The float height is within proper specification (proper measuring technique is described later in this section)

NOTE:

Perform all jetting changes on a motorcycle that has been warmed up to proper operating temperature.

The carburetor on your Cobra motorcycle is quite adjustable. Figure 8 shows its range of adjustment and in particular what adjustable component affects what range of operation (specifically throttle position).

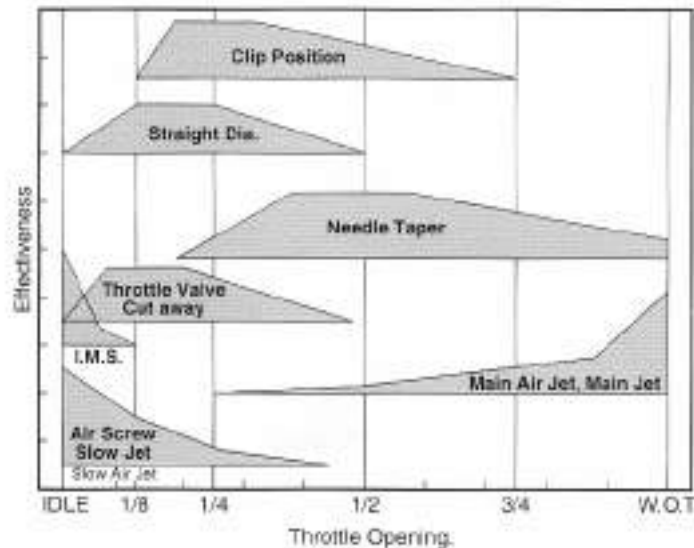

Figure 29

AIR SCREW ADJUSTMENT:

Adjust for maximum idle speed

The air adjustment screw is located on the left side of the carburetor. It is the smaller of the two adjustment screws and requires the use of a small flat blade screw driver for adjustment. After adjusting for maximum idle speed, use the idle screw to adjust the desired idle speed.

NOTE:

If the air screw requires more than 3 turns out, replace the pilot jet for one that is one size leaner (smaller number) then readjust the air screw.

IDLE ADJUSTMENT:**Adjust for desired idle speed**

The idle speed screw is located on the left side of the carburetor. It is the larger of the two screws on the side of the carburetor and is unique with its knurled head for easy fingertip adjustment. To raise the idle, turn the screw in, clockwise, (in 1/4 turn increments) and rev the engine after each adjustment. To lower the idle, turn the screw counter-clockwise.

TOP END JETTING:**Adjust for clean full throttle acceleration**

Jet your top end (main jet) based on the acceleration of your Cobra Motorcycle on the longest straight at the track. Observe any of the lean or rich symptoms (spark plug appearance and bike performance) listed above and change your jetting accordingly.

PART THROTTLE**Adjust for desired acceleration**

Using an area of the track that allows the rider to operate and mid throttle and transition (accelerate, or 'roll on') from closed, or mostly closed throttle, to a larger throttle opening. Observe the rich and lean symptoms listed above. Adjust the jet needle position by moving the clip from its current position (move the clip higher on the needle to make the bike run leaner, or move the clip lower on the needle to make the bike run richer) to one higher or lower.

Troubleshooting

1) Engine not behaving properly

- a) Carburetor top is installed backwards (happens a lot)
- b) The carburetor slide indexing pin is missing

2) Engine is down on power

- a) Clutch engagement is not set properly
- b) Jetting is incorrect
- c) Silencer needs repacked
- d) Exhaust pipe
 - i) Has excess carbon buildup
 - ii) Has large dent in it
- e) Compression is low
 - i) Piston
 - ii) Rings
- f) Reeds are damaged
- g) Ignition timing is incorrect

3) Engine is excessively loud

- a) Silencer needs repacking

4) Engine 'blubbers' at high RPMs

- a) Jetting too rich

5) Engine won't start

- a) Fuel
 - i) None in tank
 - ii) Is sour or bad
- b) Carburetor is dirty
- c) Ignition
 - i) Spark plug fouled
 - ii) Spark plug cap off
 - iii) Engine Shut-off 'kill' switch is shorted
 - iv) Bad electrical ground
 - v) Stator winding damaged
- d) Exhaust is plugged

6) Engine won't idle

- a) Idle knob needs adjusted
- b) Carburetor jets are dirty
